

What is claimed is:

1. A handbook comprising:

at least one generalized page; and

at least one specialized page;

wherein the specialized page contains particular content to the specific use of the handbook,

wherein the generalized page is general to the use of the handbook,

wherein the specialized page is formed by at least a part of a printable sheet comprising:

an adhesive side with an adhesive layer on at least a part of the sheet; and

a printable side containing the particular content printed by a printing means, and

wherein the at least one specialized page is formed by attaching at least part of the adhesive side of the printable sheet to at least one generalized page.

2. A handbook as described in Claim 1, wherein the handbook functions as at least one of an official record and an indication of qualification.

3. A handbook as described in Claim 1, wherein two or more generalized pages are permanently bound together prior to attaching the at least one specialized page.

4. A handbook as described in Claim 2, wherein two or more generalized pages are permanently bound together prior to attaching the at least one specialized page.

5. A handbook as described in Claim 1, wherein the printable side of the printable sheet further comprises:

multiple printing spaces,

wherein the multiple printing spaces form corresponding multiple pages of the specialized pages, and the adhesive layer is formed on at least a portion of back of one of the printing spaces.

6. A handbook as described in Claim 2, wherein the printable side of the printable sheet further comprises:

multiple printing spaces;

wherein the multiple printing spaces form corresponding multiple pages of the specialized pages, and the adhesive layer is formed on at least a portion of back of one of the printing spaces.

7. A handbook as described in Claim 1, wherein the printable side of the printable sheet further comprises:

multiple printing spaces; and

at least one fold line,

wherein the multiple printing spaces form corresponding multiple pages of the specified pages, and the fold line is disposed along a border between at least two of the printing spaces by which the printable sheet can be folded up into a concertina, and the adhesive layer is formed on at least a portion of the back of each of the printing spaces.

8. A handbook as described in Claim 2, wherein the printable side of the printable sheet further comprises:

multiple printing spaces; and

at least one fold line,

wherein the multiple printing spaces form corresponding multiple pages of the specified pages, and the fold line is disposed along a border between at least two of

the printing spaces by which the printable sheet can be folded up into a concertina, and the adhesive layer is formed on at least a portion of the back of each of the printing spaces.

9. A handbook as described in Claim 1, wherein the printable side of the printable sheet further comprises:

multiple printing spaces,  
wherein the at least one printing space is separable from the printable sheet, and the adhesive layer is formed on at least a portion of the back of each of the printing spaces.

10. A handbook as described in Claim 2, wherein the printable side of the printable sheet further comprises:

multiple printing spaces,  
wherein the at least one printing space is separable from the printable sheet, and the adhesive layer is formed on at least a portion of the back of each of the printing spaces.

11. A handbook as described in Claim 9, wherein the printable surface of the printable sheet further comprises:

at least one perforated line disposed along the border between at least two of the printing spaces by which at least one of the printing spaces can be separated from the printable sheet.

12. A handbook as described in Claim 10, wherein the printable surface of the printable sheet further comprises:

at least one perforated line disposed along the border between at least two of the

printing spaces by which at least one of the printing spaces can be separated from the printable sheet.

13. A handbook as described in Claim 5, wherein the size of the printing space is smaller than that of the generalized page.

14. A handbook as described in Claim 6, wherein the size of the printing space is smaller than that of the generalized page.

15. A handbook as described in Claim 7, wherein the size of the printing space is smaller than that of the generalized page.

16. A handbook as described in Claim 8, wherein the size of the printing space is smaller than that of the generalized page.

17. A handbook as described in Claim 9, wherein the size of the printing space is smaller than that of the generalized page.

18. A handbook as described in Claim 10, wherein the size of the printing space is smaller than that of the generalized page.

19. A handbook as described in Claim 11, wherein the size of the printing space is smaller than that of the generalized page.

20. A handbook as described in Claim 12, wherein the size of the printing space is smaller than that of the generalized page.

21. A method for making a handbook comprising the following steps:

printing particular content on at least one printable sheet using a printing means,  
wherein the printable sheet comprises:

an adhesive side having an adhesive layer on at least a part of the side;

a printable side; and

a detachable sheet removably attached to the adhesive layer,

removing the detachable sheet from the printable sheet;

pressing the adhesive layer to at least one generalized page general to the use of the handbook, in order to attach at least a part of the printable sheet to the generalized page, and to form at least one specialized page containing particular content to the specific use of the handbook.

22. A method for making a handbook as described in Claim 21, wherein the handbook functions as at least one of an official record and an indication of qualification.

23. A method of making a handbook as described in Claim 21, further comprising the steps of:

retrieving the particular content from a database; and

transferring the particular content to a printing means.

24. A method of making a handbook as described in Claim 22, further comprising the steps of:

retrieving the particular content from a database; and

transferring the particular content to a printing means.
